 - **COMPANIES SHOWCASED:** Aria Neurosciences, BeneVir Biopharm, CytoDol Technologies, Inthera Biosciences, Oculogica

Canget Technology Status

- FL118, a small molecule, overcomes multiple drug resistance mechanisms to effectively and safely eliminate human colon tumors in animal models.
- NCI just awarded Canget an SBIR Fast-Track to help bring FL118 to an IND.
- Available data suggest GLP PK and Tox findings will allow for clinical use.
- We expect to file an IND for clinical testing of FL118 within three years.
- Canget has an active back-up program and several promising back-up compounds are in the pipeline, as are other cancer indications.
- Current US Market size for colon cancer is around **\$2.88B** annually.
- Canget has a strong team and scientific advisors, including **Dr. Mansukh Wani**, the founder of Taxol and Camptothecins, and **Dr. Enrico Mihich**, the founder of Grace Cancer Drug Center at Roswell Park Cancer Institute and the former AACR President and NCI Board member.
- (For more information, see Canget website: www.canget-biotek.com)
